

Syed Wajahat Quadri

Software Engineer

✉ quadrisyedw@gmail.com ☎ +966537188280 📍 Jeddah, Saudi Arabia 📄 Iqama: Transferable

🚗 Driving License: Yes 🌐 LinkedIn 🐙 GitHub 🔗 Portfolio

I’ve delivered end-to-end systems — SaaS platforms, AI-powered applications, computer vision pipelines, embedded AI on Raspberry Pi, and production-grade web apps. I bring a strong blend of software engineering, applied AI/ML, DevOps and hardware–software integration — along with hands-on leadership, stakeholder communication, and a bias toward building practical, production-ready solutions that actually ship.

📁 PROFESSIONAL EXPERIENCE

May 2025 – Present
Jeddah, Saudi Arabia

H&H Technology

Lead Technical Engineer

- Developed embedded AI solution for commercial elevators: designed an on-device floor detection pipeline (Pi 5 + accelerometer + barometer) and deployed inference that runs locally with **5ms** latency for detection. (using python on Linux)
- Built a lift health-monitoring system: real-time telemetry ingestion, time-series logging, and an admin analytics portal to track anomalies and device health.
- Implemented a kiosk/CMS for elevator UI content delivery with remote updates for devices; containerized services for local hosting and remote content sync.
- Designed and 3D-printed a custom housing for Pi and the sensors into a compact layout.
- Developed “Gym Bro AI” — a form-correction & rep-counting app using OpenCV and on-device inference; integrated with the admin portal for session analytics.
- Led pre-sales technical consultations and delivered PoCs; mentored junior engineers on embedded prototyping and system integration.

Nov 2025 – Present
Jeddah, Saudi Arabia

Saudi Binladen Group (SBG)

IT Support

- Provided first and second level IT support, resolving hardware, software, network and enterprise application issues while meeting SLA targets.
- Configured and maintained laptops, IP phones, IoT devices and network access (LAN/Wi-Fi/VPN); managed permissions, updates and security controls.
- Utilized ITSM/ITAM systems for incident tracking, asset management and documentation; ensured clear escalation and root-cause reporting.
- Monitored bandwidth, system performance and endpoint security to maintain stable, secure infrastructure operations.
- Occasionally acted as IT Section Head, coordinating support activities, enforcing access policies and aligning IT services with operational needs.

Dec 2024 – Mar 2025
Jeddah, Saudi Arabia

Assem Mahmoud Alireza Establishment

Technical Lead

- Built full-stack web app with React frontend and Node.js / FastAPI backend; designed RESTful APIs and validated integrations with Postman.
- Deployed and managed Docker containers and handled instances on AWS EC2 and Savalla.
- Designed, fine-tuned, and deployed LLMs and AI agents for use cases like financial analysis, legal/document generation and executive workflows.
- Implemented RAG and dedicated knowledge bases, plus synthetic-data pipelines and model distillation to improve ML performance.

- Assembled a local inference workstation and configured lightweight Linux OS for on-prem model serving and scalable inference.
- Built OCR and computer-vision pipelines to extract structured data from images.
- Automated ops and data workflows with Python — web scraping, ETL, health checks, log collection, deployment scripts and diagnostic reports.
- Led a cross-functional R&D team, mentored engineers in React/Node/Python and ran workshops on prompt engineering and data handling.
- Acted as primary technical contact for stakeholders: triaged app/infra incidents, accelerated root-cause analysis.

WeHearYou

Sep 2023 – Jul 2024
USA (Remote)

Data Analyst

- Performed data segmentation, structuring and preprocessing tailored for neural network pipelines and ML model requirements.
- Compiled and managed large gesture datasets; leveraged MediaPipe to extract keypoints from camera feeds for model training.
- Applied validation, cleaning and augmentation techniques to improve data quality and reduce model errors caused by input anomalies.
- Monitored deployed models in production, investigated data-related issues and coordinated fixes with engineering teams to ensure stability.

May 2023 – Aug 2023
USA (Remote)

Machine Learning Intern

- Designed and optimized ML data pipelines in Python — handling collection, cleaning, augmentation, labeling, preprocessing and dataset structuring for training, testing and evaluation.
- Built an ASL translator prototype (Android Studio) with an integrated AI model for near-real-time inference, including a user-facing interface and stability improvements.
- Ran MediaPipe-based data extraction and fed structured keypoints into neural network pipelines for model training and evaluation.
- Debugged prediction issues through profiling, iterative tuning and performance optimization to improve model accuracy and runtime efficiency.

PROJECTS

Mar 2025 – May 2025

Generative Toolbox: A SaaS

Developed and launched a SaaS platform with generative AI tools, powered by the Google Gemini 2.5 experimental model and a Supabase backend.

Sep 2023 – May 2024

Comparative Study on Chatbot Performance

Designed, developed, and evaluated two chatbot systems (dense model & Google Dialogflow). The dense model achieved **77%** accuracy, **79%** precision, and **77%** F1; Dialogflow scored **~79%** across all metrics. Documented failure modes, edge cases, and operational considerations; proposed future work (Word2Vec, RNNs, LSTMs).

Feb 2024 – May 2024

Facial Recognition Attendance System

Developed a facial recognition system for contactless attendance. Implemented Haar-cascade classifiers for face detection and CNNs for recognition; Developed an image web-scraper for dataset creation and admin features to add new employees. Built a user interface with CustomTkinter; achieved **83%** accuracy.

Feb 2024 – May 2024	Research Recruitment Web Application Built a recruitment web-app using Django and FastAPI. Used Django ORM for efficient DB handling, secure authentication, email verification, and a banning system for violators. Implemented logging, error-handling, data encryption, and compliance measures; used NLP to extract key details from participant profiles.
Feb 2023 – May 2023	American Sign Language Translator Created a real-time ASL translator using TensorFlow, MediaPipe, NumPy, and CustomTkinter. Engineered webcam capture, trained Keras models on ASL alphabet datasets, and produced robust debugging outputs and operator guidance to ensure demo stability and usability.

 SKILLS

Programming — Python, JavaScript/TypeScript, C, C#, PHP, SQL, HTML/CSS.

Full-Stack / Backend — React, FastAPI, Django, Node.js, Laravel, REST, GraphQL, JWT, async processing.

AI / ML — TensorFlow, Keras, MediaPipe, OpenCV, fine-tuning, distillation, RAG, prompt engineering, AI agents.

Infra / DevOps — Docker, CI/CD, AWS EC2, Linux, environment config, logging, monitoring, production debugging.

Databases — MySQL, PostgreSQL, Redis, Supabase, relational database design, query optimization.

IoT / Edge Systems — Raspberry Pi, Arduino, GPIO , sensor integration, device telemetry, 3D printing.

Developer Tools — Git, Postman, Anaconda, VS, VS Code, PhpMyAdmin.

Soft Skills — Clear communicator, adaptable, problem-solver, collaborator, team mentor.

 CERTIFICATIONS

CS50P - Programming with Python HarvardX	AI Fundamentals IBM
Data Fundamentals IBM	Git Essentials LinkedIn
Laravel Essentials LinkedIn	

 EDUCATION

BSc Computer Science with Artificial Intelligence
Northumbria University
Newcastle Upon Tyne, United Kingdom
